

AVANT INSTITUTE

Population Health and
Practice Development Fellowship

www.avantinstitute.com/fellowship

WHY CHOOSE US?

Innovation is what we do. We are always on the cutting edge of testing new collaborative models of care to improve patient outcomes, enhance quality of care, and build sustainable models of practice. We partner with some of the most innovative pharmacies across the country to bring this fellowship to you.

WHAT IS THE MODEL?

The Population Health and Practice Development Fellowship is designed to prepare the fellow to become an independent clinician, with supervisory and leadership responsibilities. The fellow is responsible for building and expanding pharmacist-led clinical services within the community and collaborative settings. Fellows who complete this program are well-equipped to obtain clinical or operational leadership roles. This program will develop a robust entrepreneurial skill set to lead the innovative future models of pharmacy practice.

WHAT ARE THE PRIMARY SERVICES?

Face-to-face Services

Our focus is on preventive care services, such as the Medicare Annual Wellness Visits. There is so much value that can be added to this visit when a pharmacist is added to the team.

Non-Face-to-Face Services

This includes services like chronic care management (CCM), remote physiologic monitoring (RPM), and behavioral health integration (BHI). With these services, pharmacists have the opportunity to build lasting relationships, identify and resolve drug therapy problems and disease state management, and drive patient outcomes.
